"Evaluation of K-Strophanthin in Crude and in Drug Form by Chemical Methods."

Prague, Ceskoslovenska Farmacie, Vol 15, No 7, Sep 66, pp 341-348

Abstract [Authors' English summary modified]: Content of total glycosides is determined colorimetrically by Baljet's reaction to strophanthin used as a standard. The content of the individual main glycosides of K-strophanthin is determined colorimetrically after separation by paper chromatography. The part of glycosides derived from 17-beta-H-strophanthin, from strophanthin acid, and from 10-beta-hydroxy-19-nor-periplogenin is determined after hydrolysis; the products of hydrolysis are separated by paper chromatography, and the determination of the intensity of their fluorescence is used for a semiquantitative evaluation of their amounts. 4 Figures, 4 Tables, 22 Western, 1 Czech, 1 Russian, 2 East German references. AUTHOR: Jungowski, Wiktor, (Warsaw)

TITLE: Analysis of the influence of gas friction and piston mass on the temperature of stagnation in a hypersonic wind tunnel with a movable piston

PERIODICAL: Archiwum Budowy Maszyn, v. 8, no. 1, 1961, 3 - 20

TEXT: The author performs an analysis of all known methods elaborated by Western scientists pertaining to subject mentioned in the title and presents his method for calculating the stagnation temperature in a hypersonic gun tunnel. The calculations were made in a gun tunnel of the Imperial College where the author participated in experiments. There are 1 table, 12 figures and 16 non-Soviet -bloc references. The reference to the 4 most recent English-language publications read: (Ref. 6: K. N. C. Bray, L. Pennelegion i R. A. East: A Progress Report on the University of Southampton Hypersonic Gun Tunnel. ARC 20, 520 20.11.58) (Ref. 7: K.N.C. Bray, L. Pennelegion i R. A. East: Performance Studies for the University of Southampton Hypersonic Gun Tunnel. Colston Symposium, Bristol 1959, Paper 6). AUTHOR: Jungowski, Wiktor (Warsaw)

TITLE: A method for computing the stagnation temperature in a hypersonic gun tunnel and some remarks on the design of such tunnels

PERIODICAL: Archiwum budowy maszyn, v. 9, no. 3, 1962, 399 - 411 .

TEXT: This paper is in continuation of the author's previous publications (A.B.M., PWN, v. 8, no. 1, Warsaw, 1961, and AMS, no. 3, 1962). Two methods (one graphical and the other analytical) of obtaining the intensity of the shock wave at the end of the tube are described. The method of finding the stagnation temperature is explained and its application to the design of wind tunnels is discussed. More accurate evaluation of the stagnation temperature is obtained here by taking into consideration factors affecting the intensity of the shock wave and its damping, the piston movement, entropy changes and by assuming proper initial and boundary conditions. The typical characteristic parameters of the hypersonic gun tunnel

 TITLE : New Rapid Methods of Macro-, Semimicro-, and Micro-Gravimetric Determination of Lead by Means of Organic Reagents.
 ORIG. PUB. : Studii si cercetari chim. Acad. RPR. Fil. Cluj, 1957, 8, No 3-4, 269-279
 ABSTRACT : Gravimetric methods of determination of Pb have been worked out, which are based on the use of mono-phenylhydrazo-dicarboxythiamide (I), monoallylhydrazo-dicarboxythiamide (II), and mononaphthylhydrazo-dicarboxythiamide (III) (RZhKhim, 1959, 4303), with which Pb²⁺ forms yellow crystalline precipitates insoluble in ethanol, ether and in the solution containing excess reagent. I, II, and III form insoluble mercaptides with almost all cations of heavy metals; cations of alkaline earth metals are not precipitated by these reagents. Pb²⁺ replaces two H atoms of the mercaptan, forming the following mercaptides: C₆H₅-C₂N₄H₃S₂Pb, C₃H₅-C₂N₄H₃S₂Pb and C₁₀H₇-C₂N₄H₃S₂Pb.

ORIG. PUB. :

ABSTRACT : On macro-determination of Pb, 0.5-10 ml of neutral solution being analyzed (0.01-0.1 g Pb) are heated to a boil, hot ethanol solution of I or II is added, the mixture is kept on a water bath for 5 minutes, precipitate is filtered off, washed in succession with hot 50% ethanol, 95% ethanol, and ether, dried in vacuum desiccator, and weighed. Under these conditions III yields results that are too high because of its very low solubility in ethanol (0.05-0.1%); to obtain good results when using III, it is necessary to add ethanol to the solution being analyzed, and to wash the precipitate with a large amount of warm 96% ethanol. If the solution contains anions of strong acids

Title : New Rapid Method of Gravimetric Determination of
Cadmium with a Reagent of the Class of Mercap-
tanes. Communication III.

Orig Pub: Rev. Chim., 1958, 9, No 6, 302-305.

Abstract: It was found that 2-mercapto-5-anilino-1,3,4-thio-
diazole (I) used for the determination of Pb and
Hg (RZhKhim, 1958, 24757, 24774) is also suitable
for gravimetric determination of Cd. I forms
with Cd²⁺ a white precipitate (crystalline in
alcoholic medium and amorphous in alkaline med-
ium; molecular weight 528,978), insoluble in water,

Abstract: alcohol and ether, and readily soluble acids.
In determination of Cd there is added to 1-5
ml of the solution being analyzed and contain-
ing 0.01-0.05 g Cd, 10 ml C₂H₅OH, the mixture
is heated on a water bath and a 1% alcoholic
solution of I is added dropwise and with con-
tinuous stirring. If the solution being ana-
lyzed contains anions of a strong acid, CH₃COONa
is added in order to produce a buffered medium.
After heating for 15-20 minutes on the water
bath the precipitate is filtered off on a filter
crucible, washed successively with warm 50%
C₂H₅OH, 95% C₂H₅OH ether, dried in vacuum and
weighed. According to a 2nd variant of the me-
thod Cd²⁺ is precipitated with hot aqueous sol-

 TITLE : The Application of the Method for the Determination of Lead with Mercaptans to the Analysis of Medicinal Preparations
 ORIG. PUB. : Farmacia (RPR), 6, No 5, 423-430 (1958)
 ABSTRACT : A method is proposed for the quantitative determination of Pb in medicinals with 2-mercapto-5-anilino-1,3,4-thiodiazole. The method is accurate and sensitive in view of the adequate weight of the precipitate obtained and permits the determination of Pb with an accuracy of 6 gammas of Pb ions in 1 ml solution. The proposed method can be applied to the determination of Pb in the medicinal compounds listed in Vol 6 of the Rumanian Pharmacopoeia. The authors have also shown that

Title : Model Studies of Operation of Units for the
Mixing of Liquids

Orig Pub: Gaz., woda, techn. sanit., 1956, 30, No 4, 135-
140

Abstract: A study of hydrodynamics of liquids flows in
different mixers (1:20 scale models) with the
view of determining optimal designs for the
dilution of sewage water used for irrigation.
Also investigated was the mixing effectiveness
on change in the rate of flow of the liquids and

of the effect thereon of regulating partitions.
A mixer of simple design is proposed (detailed
drawings are included) which affords the follow-
ing advantages: self-adjustability, absence of
dead zones and good mixing conditions.

„Wstępne doświadczenia nad wartością pyłu cementowego z elektrofiltrów jako nawozu potasowego”, Cement-Wapno-Gips, No. 3, 1955, pp. 57-62, 3 figs., 5 tabs.

Preliminary experiments were carried out to determine whether it is possible to use as a fertilizer cement dust from electrofilters, containing about 8 per cent of K_2O . The cement dust proved a good source of potassium for rye-grass and sunflower; moreover the presence of certain other components, such as lime, silica and microelements, favourably influences the development and yield of crops. The presence of lime makes it possible to regard cement dust as a potassium-lime fertilizer. The low potassium content strongly suggests that the dust ought to be processed in order to obtain a more concentrated product with greater fertilizing properties.
